

Danger Level 2 - Moderate

Tendency: Increasing avalanche danger

on Thursday 04 04 2024

New snow

1500m

Snowpack stability: fair

Frequency: some

Avalanche size: medium

Gliding snow

2200m

Snowpack stability: fair

Frequency: few

Avalanche size: large

Wet snow

2000m

Snowpack stability: poor

Frequency: some

Avalanche size: medium

Beware of new snow and wet avalanches from new snow!

In the High, Western and Low Tatras there is a moderate avalanche danger (level 2). After an exceptionally warm period, there has been a cooling associated with heavy precipitation. Above 1200 m it snowed. Above 1500 m, up to 25 cm of new snow fell. The interface between new and old snow is particularly dangerous. There is a danger especially with high additional loads. As the weather gradually warms up, spontaneous wet avalanches from new snow may occur below 2000 m. On slopes with grassy ground, in all orientations, there is also the risk of slippery avalanches, which can reach large dimensions.

Snowpack

The new snow will become wet due to warming and will melt quickly. Underneath is old firn snow, with a layer of Saharan dust on the surface. At altitudes below 1 300 m above sea level, snow cover is only sporadic.

Tendency

With warming slightly rising.

Frequency: some

Avalanche size: medium

Watch out for new snow and wet avalanches from the new snow.

In Mala and Veľká Fatra a moderate avalanche danger (2nd degree) is declared above the 1300 m above sea level, where up to 35 cm of new snow has accumulated in places. The new snow has fallen mostly on grassy ground, but in places also on old hard snow. The snowfall was associated with wind, so that snow slabs and pillows could form on the ground. As the weather warms up, spontaneous avalanches and avalanches may occur.

Snowpack

In the Fatras, up to 35 cm of new snow was added in places. It will get wet due to warming and will melt quickly. Underneath, there are snowfields of old firn snow with a layer of Saharan dust on the surface. At altitudes below 1 300 m above sea level, snow cover is only sporadic.

Tendency

With warming slightly rising.
