## Danger Level 2 - Moderate

**AM:**

**Tendency: Increasing avalanche danger** ↗  
 on Monday 15 04 2024

Gliding snow

Snowpack stability: **fair**  
 Frequency: **few**  
 Avalanche size: **medium**

Wet snow

Snowpack stability: **fair**  
 Frequency: **few**  
 Avalanche size: **medium**

**PM:**

**Tendency: Increasing avalanche danger** ↗  
 on Monday 15 04 2024

Gliding snow

Snowpack stability: **fair**  
 Frequency: **some**  
 Avalanche size: **medium**

Wet snow

Snowpack stability: **fair**  
 Frequency: **some**  
 Avalanche size: **medium**

## Beware of wet avalanches and avalanches!

Due to warm weather and sunlight, most steep and very steep slopes, especially those with a southerly orientation, are at risk of wet avalanches, slides or foundation avalanches. A slight overnight cooling will make the cover relatively firm. Avalanches are more likely to occur in the afternoon. Small avalanches are also dangerous, with the risk of falling over rock thresholds. In Velká and Malá Fatra, the snow cover is very patchy and does not pose a significant avalanche danger. However, there is a risk of slipping on snow firn fields.

## Snowpack

The snow cover is soaked throughout the day and very little stabilises at night. There is a high risk of new foundation avalanches where the snowpack is soaked through to the grass base. In Velká and Malá Fatra the snow cover is very patchy and there is a risk of slipping on snow firn fields.

## Tendency

During the day due to warming and sunlight rising.
