

Danger Level 1 - Low

Tendency: Decreasing avalanche danger
on Saturday 25 04 2026

Wet snow

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **medium**

Watch out for wet snow on sunny slopes on S exposures.

In the Tatras and Low Tatras there is only a SMALL avalanche danger, 1st degree. Snow cover is generally stable. Up to 5 cm of new snow has fallen during the last snowfall period. Avalanche release is possible only sporadically on exposed southern slopes after a slight warming. Spontaneous avalanches are not expected.

Snowpack

The weather during Friday will be influenced by the interface between high and low pressure. Expect partly cloudy windy weather, snow cover is generally stable. Up to 5 cm of new snow has been added on top of the old, hard snow at the highest elevations during the last snowfall period. Depending on orientation, the continuous snow cover is between 1300 and 1700 m above sea level. Its height reaches 30 to 150 cm, with the most snow in the Low Tatras.

Tendency

decreasing with the expected development of the weather.
